

# Docker

저녁이 있는 프로젝트  
오상훈  
6 Hours, 1 Month

# Setup Docker

- ❖ Need to Sign Up & Sign in : Remember Docker ID
  - 주의 : Desktop login 시 email 아닌 본인 ID(성명) 사용.
- ❖ Windows OS : <https://www.docker.com/>
  - > docker --version
  - > docker run hello-world
  - > docker image ls
  - > docker --help
  - > docker container --help
  - > docker run --help

# Install mariadb

- ❖ Installing and using MariaDB via Docker

<https://mariadb.com/kb/en/library/installing-and-using-mariadb-via-docker/>

```
$ docker search mariadb
```

```
$ docker images
```

```
$ docker run -p 3306:3306 -e MYSQL_ROOT_PASSWORD=tiger --name  
mariadb10.3 -d mariadb:10.3 → or mariadb:latest
```

```
$ docker logs mariadb10.3
```

```
$ docker ps -a
```

```
$ docker stop b69e7b0a8677
```

```
$ docker start mariadb10.3
```

```
$ docker rm -v $(docker ps -a -q -f status=exited)
```

```
$ docker images
```

```
$ docker rmi -f 199cc294e316
```

- ❖ or Way

```
$ docker run -p 3310:3306 -e MYSQL_ROOT_PASSWORD='tiger' --name  
mariadb10.3 -d mariadb:10.3
```

## Run mariadb - create database and user

```
$ docker start mariadb10.3          → or 58ac14799005
$ docker exec -it mariadb10.3 bash
# apt-get update && apt-get install -y vim
# ip address | grep eth0 | awk '{ print $2 }'
# vi /etc/mysql/mariadb.cnf          → UTF-8 위해 관련 주석 전부 제거 & 추가
# /etc/init.d/mysql restart
root@:/# mysql -uroot -p
```

Enter password:

```
MariaDB> CREATE DATABASE yojulabdb
```

```
    CHARACTER SET = 'utf8' COLLATE = 'utf8_general_ci' ;
```

```
MariaDB> CREATE USER 'scott'@'172.17.0.1' IDENTIFIED BY 'tiger';
```

```
MariaDB> GRANT ALL PRIVILEGES ON yojulabdb.* TO 'scott'@'172.17.0.1';
```

```
MariaDB> FLUSH PRIVILEGES;
```

```
MariaDB> show databases ;
```

```
MariaDB> use yojulabdb;
```

❖ Option command(Need login as localhost)

```
MariaDB> CREATE USER 'scott'@'localhost' IDENTIFIED BY 'tiger';
```

```
MariaDB> GRANT ALL PRIVILEGES ON yojulabdb.* TO 'scott'@'localhost';
```

# Install MongoDB

- ❖ Installing and using MongoDB via Docker

[https://subscription.packtpub.com/book/big\\_data\\_and\\_business\\_intelligence/9781787126480/1/ch01lvl1sec18/running-mongodb-as-a-docker-container](https://subscription.packtpub.com/book/big_data_and_business_intelligence/9781787126480/1/ch01lvl1sec18/running-mongodb-as-a-docker-container)

- ❖ 주의 : Desktop login 시 email 아닌 본인 ID(성명) 사용.

```
$ docker search mongo
```

```
$ docker pull mongo:3.4.20
```

```
$ docker images
```

```
$ docker run -d --name mongodb3.4.20 --net=host mongo:3.4.20 --bind_ip  
127.0.0.1 --port 27000
```

```
$ docker logs mongodb3.4.20
```

```
$ docker ps -a
```

```
$ docker stop b69e7b0a8677
```

```
$ docker start mongodb3.4.20
```

```
$ docker rm -v mongodb3.4.20
```

```
$ docker images
```

```
$ docker rmi -f 199cc294e316
```
